

AMENDMENTS TO THE ABSTRACT:

Please replace the paragraph (Abstract) beginning at page 18, line 1 with the following rewritten version:

ABSTRACT

~~It is an object of the present invention, in a ceiling-embedded type or ceiling suspended type air conditioner, to make the air current distribution inside the air conditioned room satisfactory, and to simplify the structure needed to regulate the wind direction of the air current blown out from each of the outlets. The~~ An air conditioner (1) principally comprises ~~includes~~ a face panel (3) ~~casing having a casing lower part~~ formed by an alternating sequence of four panel side parts (30a—30d) and four corner parts (30e—30h). The face panel (3) comprises ~~casing further has~~ main outlets (32a—32d) disposed ~~so that they run along~~ each of the panel side parts (30a—30d), and auxiliary outlets (32e—32h) disposed at the corner parts (30e—30h). ~~At the main outlets (32a—32d) are provided~~ The air conditioner further includes horizontal flaps (35a—35d) ~~oscillatable~~ rotatably supported about the longitudinal axes thereof ~~in the longitudinal direction of the main outlets~~. A circumferential edge part of each of the auxiliary outlets (32e—32h) is formed so that the air from each of the auxiliary outlets (32e—32h) is blown out in a fixed direction.
